FUNK'S  
**G**  
HYBRID

# get an EXTRA LOAD from each bushel!

Compare a bushel bag of Hoffmann Funk's-G seed with a bag of any other hybrid seed — side by side. They look pretty much alike, don't they? But plant those same bags of seed, harvest them, and then compare the yields you got.

Such weigh-and-compare figures from all over America prove Funk's G-Hybrids are 5 to 15 bushels better, time after time. The right choice of seed can mean an extra wagon load of quality corn from each bushel of seed you plant!

## PROVE IT YOURSELF

An exaggerated claim? Not at all. Take a large-scale, five-year, side-by-side comparison made in Illinois, for instance. 118 Funk's G-Hybrid yields were weighed and compared with 197 yields of other brands of hybrid corn. The result? Against this top competition Funk's G-Hybrids averaged exactly 11 bushels an acre more corn!

Now figure it out for yourself—it's easy to do. A bushel of seed will plant six or seven acres, and you get an extra 11 bushels to the acre. Multiply the two together and you come up with an extra wagon load. Then go a step further and multiply this wagon load by the number of bushels you expect to plant.

The final figure you arrive at will be the bonus you get — the extra yield from Hoffmann Funk's G-Hybrid seed. All season—and particularly at harvest—you'll be glad you did.

## ALFALFA, CLOVERS, TIMOTHY and BIRDSFOOT TREFOIL

**ALFALFA** — Several certified types to choose from—DuPuits, Atlantic, Buffalo, Ranger, Vernal. At least one of them is bred and developed to fill your requirements, and fit your conditions and location.

**CLOVERS** — We urge prompt orders for our "Pennscott" strain, heaviest yielding red clover in official tests over a wide area.

**TIMOTHY** — Hoffmann timothy is strictly high quality. Northeastern farmers rely on it for cleanliness and sound growth.

**BIRDSFOOT TREFOIL** — a long-lived legume. Plant the cleanest seed you can buy . . . Hoffmann's Viking, Empire, or European.

# Hoffmann FUNK'S G produces "TOP-PAY CROPS"

Check your Hoffmann Funk's G-Hybrid yields against any of its competitors on your own farm. Pick equal areas, the same number of rows. Don't just guess—be sure to WEIGH the loads. Test and COMPARE for moisture. Don't take anyone's word for it, note the many "quality" differences for yourself. PROVE your success with G-Hybrids!

You'll find that Hoffmann Funk's G-Hybrids will out-perform and outyield all competitors right on your own farm—in your cribs or silos—where it counts for YOU. Today's great G-Hybrids represent today's highest development in the science of corn breeding. Put "Top Pay Crops" in your fields — and join the parade to greater profits.

## QUALITY SEEDS FOR "EXTRA-PROFIT" CROPS

**OATS** — Every extra bushel means extra profits for you . . . and you can count on those extra bushels per acre at harvest time if you sow Hoffmann certified Garry, Rodney or Clintland oats this spring. And remember that the two prime factors in obtaining high yields are quality seed and early seeding. Plant Hoffmann strains as soon as possible, in a good seedbed, limed according to test, with fertilizer drilled deep.

**BARLEY** — Hoffmann offers a choice of two performance-proved barley varieties—Moore and Erie. Moore resists spot disease and mildew. Erie yields well, is resistant to powdery mildew. Both have smooth awns, firm to stiff straw. Moore is 4 to 5 days later than Erie.

## LONGER LASTING LOW-COST PASTURES

**GOOD PASTURE**, properly managed is the least expensive source of good dairy feed. But every acre must provide maximum grazing. Hoffmann's high-quality pasture seeds provide the foundation for clean, heavy-producing pastures . . . help increase milk checks, livestock weights, and poultry profits. No thin, weedy pastures when you plant Hoffmann's seeds.

**CLOVERS, GRASSES, MIXTURES** — Hoffmann has them all — well-adapted to specific uses and ready to sow. Mixtures for lowland or highland pastures, the popular triple-purpose mixture recommended by Penn State for grazing, silage, and hay. Clean seed for clean pastures — and for extra high yields!

# Hoffman FUNK'S G-HYBRID CORN

## BEST -- wherever corn is planted

Hoffman Funk's-G seed has proved itself best for the job wherever corn is planted . . . in the short summer areas, in medium maturity locations, in full season districts. In the contests and on thousands of farms, in-the-crib or in-the-silo, yields of top quality corn have shown its superiority. Funk's-G Hybrids start fast, establish strong, healthy plants even under cold, wet conditions. They produce strong stalks that really stand up and keep going, whatever the hazards of weather in your area—wonderfully resistant to both blight and drought. Whether you plant just a few or hundreds of acres,

you get extra loads of sound corn when you plant Hoffman Funk's-G seed. You get TOP yields, quality, and standability in every bag.

### For Silage or Husking

Whether you put your corn in cribs or silos there's a Hoffman Funk's-G seed just right for your requirements. In the silage strain which we recommend there's a high percentage of actual grain-feed to total green weight—more feed units for lower-cost feeding. It will pay you to use Hoffman's special service on all your corn problems. Fill in the blank on the back page to get our trained experts' recommendations on your special problems.

## Hoffman SORGHUM

Sorghum is no longer just an "emergency" crop in the East—it's a profitable part of the cropping plans on many farms. Black Amber is Hoffman's most popular strain, and ideal partner with soybeans for ensilage. Atlas Sorgo is a late maturing strain, popular in long season areas. Hegari is early, stands well, is easy to handle. Not as sweet as the others.

## Hoffman SOYS

Soybeans need warm weather for fast growth. Beans should be cut for hay any time after the pods form, harvested for beans right after the moisture gets down to 14%. "Wilson Black" — still a leading heavy variety but in very short supply; "Hawkeye"—high yields of yellow beans; "Lincoln"—extra high oil content.

## Hoffman SUDAN GRASS

A great summer pasture to keep up milk flow. "Piper" is a new variety, vigorous, early, and a heavy yielder. "Sweet" is often preferred by cows, has broader leaves, heavier, tall stalks.

## Hoffman MILLET

"Golden" makes satisfactory leafy hay in 7 to 9 weeks. "Jap" is a tall variety which thrives on poor soil—a valuable emergency hay. Has made tremendous yields in North Central areas.

HOFFMAN is ready to fill your order right now! Supplies are on hand . . . instant shipment assured. Excellent strains of the extra-profit Funk's-G corn, for husking or silage. Dependable seeds for quick or permanent pasture and cover crops. For highest returns on your seed investment, order from Hoffman today.

**ORDER  
NOW!**

**Save Soil With  
Hoffman's Rye Grass**

Rye Grass is helping to conserve millions of tons of soil in the East. It provides a thirsty "blotter" to soak up every rain drop and adds organic matter to the soil. No cornfield should be without a good cover of Rye Grass, so order enough to protect your corn acreage. Rye grass is splendid in a rotation to improve potato ground, is often disked under in orchards to feed tree roots. It also makes fine forage for turkeys and pigs, and pasturing doesn't hurt cover-crop values.
